CombiPotatoes are a lush and decorative feature on the terrace, the balcony, the sun-room or the garden.

A new and convenient way to enjoy a vegetable garden.

Watch the potatoes' development by lifting the inner pot out.

When the potatoes reach the desired size, one can pick the desired number of potatoes, after which the inner pot is placed back into the outer pot. The potatoes then continue to grow.

Both adults and children can enjoy watching and harvesting the new, delicious potatoes.

CombiPotatoes are easy to clean when they are taken straight from the pot.

NEW BUSINESS OPPORTUNITIES FOR GROWERS

The modern consumer is conscious about healthy foods and would like to have the energy to be able to grow fresh herbs and vegetables.

With the newly developed pot system "CombiPotato", all the hard work of preparing the bed, laying potatoes, weeding and ridging is eliminated. Consumers just need to bring the grown potato plants home from the retailer and wait for the right time to "pick" the potatoes. Easy and clean!

VEGETABLE GARDEN THE EASY WAY

The unique and patented 2-in-1 pot system provides the opportunity for a continual harvest from the same plant throughout the whole season. CombiPotatoes are to be placed in a bright and sunny spot, where one would like to watch the development of the potatoes, while at the same time having something green and living to look at. The pot has a water reservoir in the bottom, which ensures that the plant does not easily dry out. By lifting the inner pot out, one can see the potatoes, and harvest them when they reach the desired size.

A PRODUCT WITH MANY ADVANTAGES

With regular watering and fertilising the plant will continue to produce new potatoes until the autumn. The product has therefore many advantages. From the beginning, the growing at the producer takes place in the final sales packaging. The plants are robust and, therefore, suitable for outdoor growing. The pots are supplied with a handle, which makes it easy for the consumer to transport the plants and pull the inner pot out of the outer pot.
